#### **DETAILED ACTION**

### Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to **a single paragraph** on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

## Claim Objections

3. Claim 3 is objected to because of the following informalities:

Claim 3 recites the limitation "the resin" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Appropriate correction is required.

Art Unit: 2831

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2003-346801 ('801).

'801 discloses an organic electrolyte capacitor comprising: a positive electrode, a negative electrode and an electrolyte capable of transporting lithium ions, wherein the negative electrode active material is a mesopored carbon material having a pore volume of 0.10 ml/g or more for pore diameter of 3 nm or larger [0038, 0043, 0053] & table 1.

Regarding claim 2, '801 discloses the mesopored carbon material is one or a mixture of a plurality of members selected from activated carbon, coconut shell coal, coke, charcoal, bamboo coal and resin carbide [0053].

### Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2003-346801 ('801) in view of JP 10-297912 ('912).

'801 discloses the claimed invention except for the resin carbide is a phenol resin carbide, or the resin is a phenol resin.

'912 discloses an electric double layer capacitor comprising a mesopored carbon comprising a phenol resin.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to form the mesopored carbon of '801 in the capacitor of '912, since such a modification would form a capacitor having a negative electrode with excellent electrical characteristics.

Regarding claim 4, '912 teaches that the mesopored carbon material is produced using Ni (see table 1).

Art Unit: 2831

### Allowable Subject Matter

9. Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest (in combination with the other claim limitations) an organic electrolyte capacitor wherein lithium ions are supported on the negative electrode and/or positive electrode so that the positive electrode potential is 2.0 V (Li/Li<sup>+</sup>) or lower, when the positive electrode and the negative electrode are short circuited (claims 5-6).

### Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 6,461,769 – Organic electrolytic cell

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Thomas whose telephone number is 571-272-1985. The examiner can normally be reached on Monday - Friday 5:30 AM - 2:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego Gutierrez can be reached on 571-272-2245. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
